

Cleaning Pumps and Hoses (Daily)

1. Set up to clean:

- **Turn on** the Propane Tanks
- **Hook up** the water supply and turn the **water on**
- **Turn on** the Propane on the Water Heater
- **Start** the Generator and **turn on** the Breaker for the pumps
- **Start** the water heater
- **Start** the air compressor

2. **Open** the main air valve on the air compressor.

3. **Close** the Main Valve on the Resin Tank.

4. **Open** the Large Three-Way Ball Valve (towards the pumps).

5. **Open** the Resin Fill Valve.

6. **Turn on** the pumps at the FORD/Metering Box and run the pumps until clean water runs back into the Resin Tank through the re-circulating hose.

7. **Turn** Bypass/Discharge Valve to the Bypass position (to the ground)

WARNING: *If the water goes into the resin tank for more than two seconds, it may ruin the resin ratio and the resulting foam!!!!*

8. With the gun hanging on the wall, **unhook** the resin line from the gun and place the line in a 5-gallon bucket.

9. **Push** the Manual Override Switch (blue button) on the Resin Pump and hot water will flush the resin out of the line and into the bucket (approx. 3-4 gallons).

10. When clear water appears, **turn off** the Manual Override. Then, using the plug provided, **plug** the Resin line on the hose.

11. **Shut off** the Water Valve for the Resin Tank.

12. **Close** the Large Three-Way Ball Valve (straight up).

13. **Shut off** the Air Compressor.
